Abstract :

The objectives of this study were (1) to expressing and the requested the administrators, student's group facilitate teacher and student for the distance education system (2) to expressing and the requested the educational expert for the distance education system, (3) to create an instructional model of distance education system.

The subjects consisted of 286 administrators, 398 student's group facilitate teacher, 400 students and 20 educational expert, were given self-administered rating-scale questionnaires Delphi Technique and open-ended questionnaire to design an artificial model of the distance education system. SPSS/PC+ computer program was used to calculate, Item Objective Congruence (IOC), Percentage, Mean, Standard Deviation, Median and Inter Quartile Range (IQR).

The research finding (1) the administrators, student's group facilitates teacher and student to expressing and the requested for the distance education system to be at a high level, (2) the educational expert to expressing and the requested for the distance education system to be at a high level, (3) the establish the proposed model for the District Non Formal Education Center (DNFEC) According to the research results, it was found out that the acquired instructional model of distance education system for the DNFEC consisted of 5 steps, they are (1) to establish the educational

philosophy and the educational management system's guideline for distance education system (2) to develop the distance education curricula (3) to produce the multi-media educational packages and the service of the instructional media (4) to transfer and convey the contents and experiences and the service of the distance education (5) to evaluate the distance education system.
